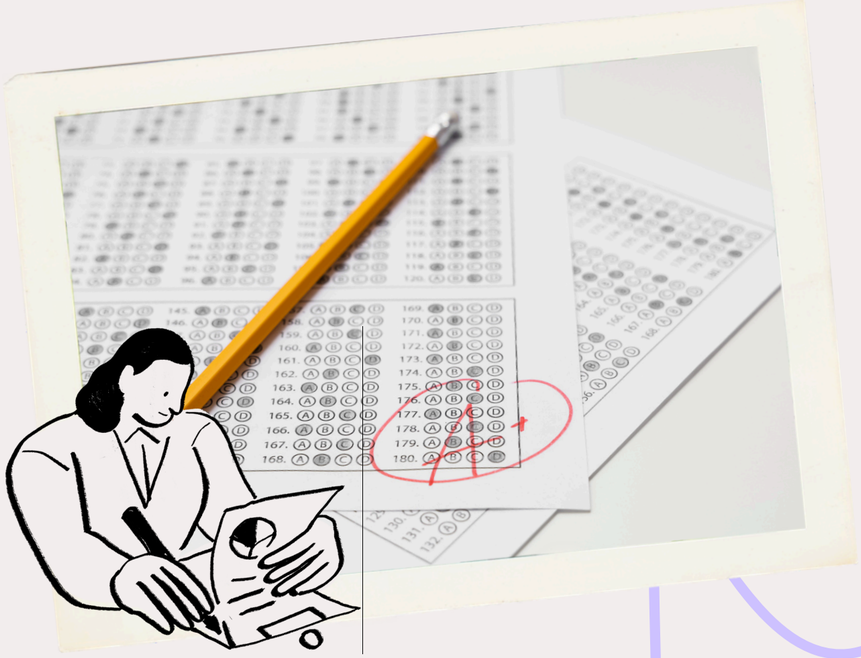
Student Development Monitoring Dashboard

A data-driven dashboard designed to monitor student development, identify risk indicators, and support program evaluation.

Portfolio by
Selvi Maharani Pujianti

Executive Summary



This project demonstrates how data analytics can support program monitoring for student development initiatives. Using a dataset of 395 students and 35 development indicators, an interactive dashboard was created to track academic performance, attendance patterns, learning engagement, and identify students at risk who may require additional support.

The dashboard enables program teams to monitor beneficiary progress, analyze trends, and support evidence-based decision-making for program implementation and reporting.

Key Monitoring Insights

- 47% of students are identified as academically at risk
- Most students study between 2–5 hours per week
- Academic progress shows a higher number of declining cases than improvement

Project Overview

This project demonstrates how data analytics can support program monitoring for education or child development initiatives. The dashboard helps track student performance, attendance patterns, academic progress, and identify students at risk who may require intervention.

Dataset Summary

- Total records : 395 students
- Variables : 35 indicators
- Focus : academic performance monitoring

Tools & Skills

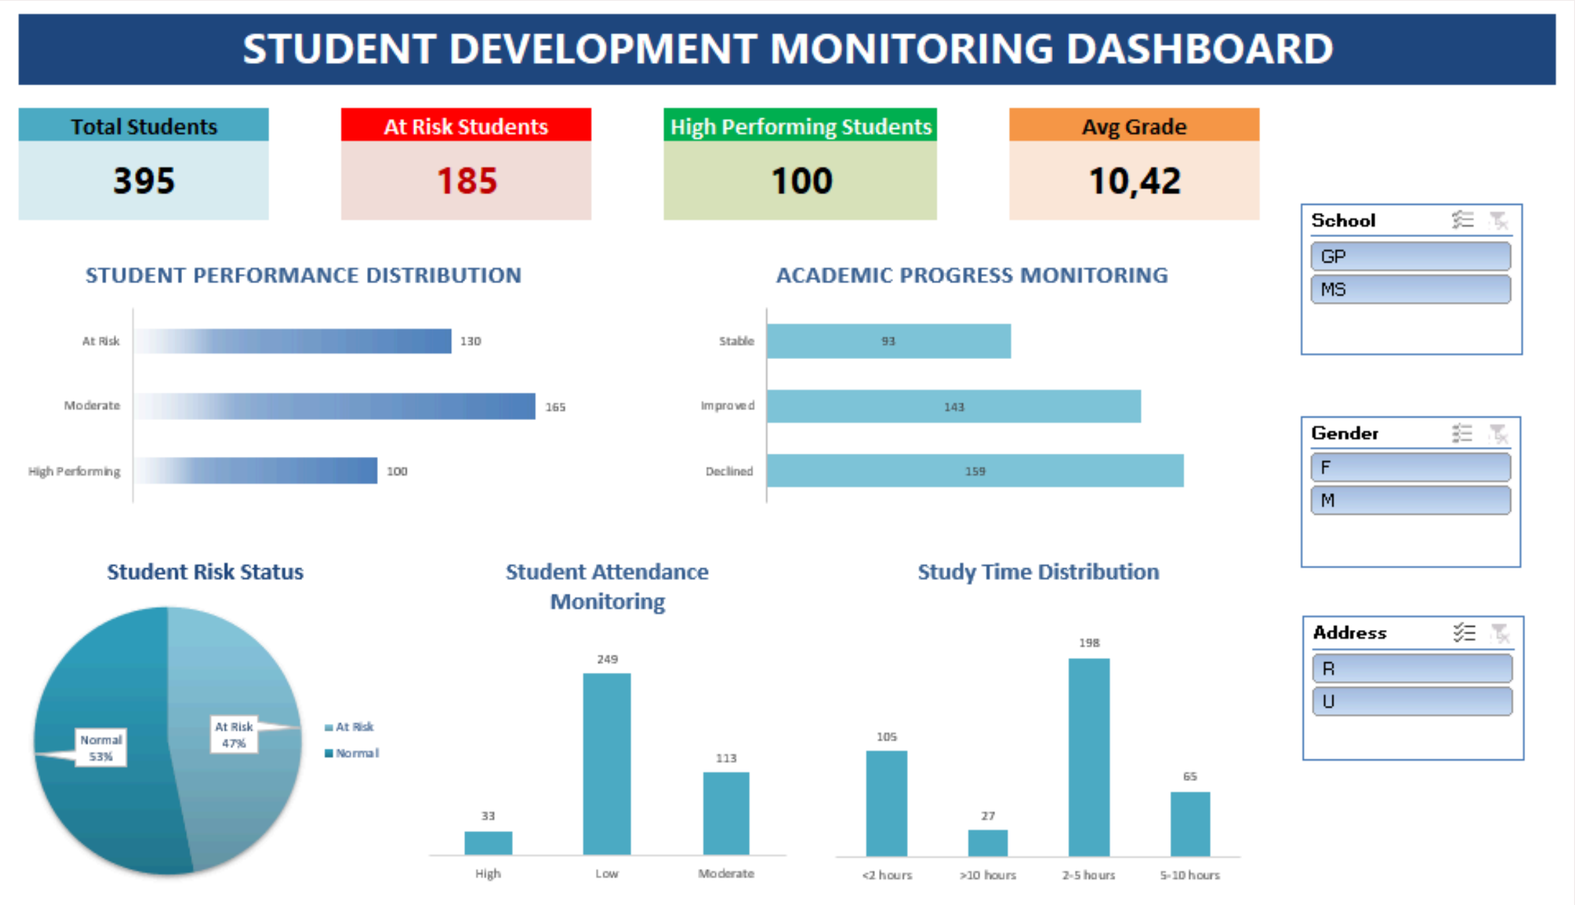
- Python (Data cleaning and preparation)
- Microsoft Excel
  - Pivot table analysis
  - Data visualization
  - Dashboard development
- Program monitoring analytics

Program Monitoring Indicators

These indicators allow program officers to monitor beneficiary development and quickly identify students requiring academic support.

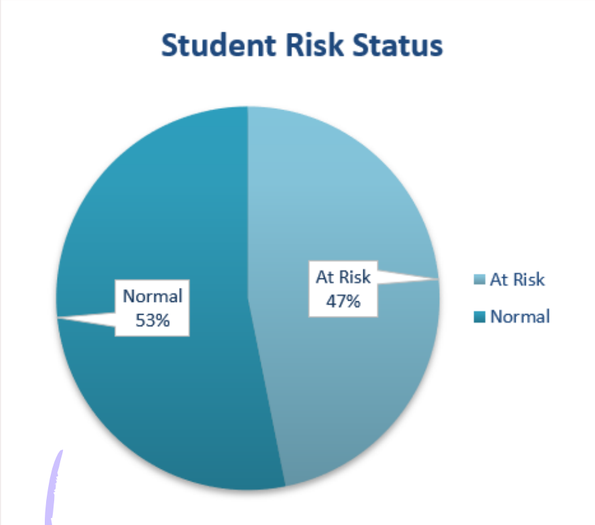
Monitoring Area	Indicator
Student Performance	Final Grade
Risk Monitoring	Risk Flag
Attendance Tracking	Absence Level
Learning Engagement	Study Time
Academic Progress	Grade Progress

Dashboard Overview

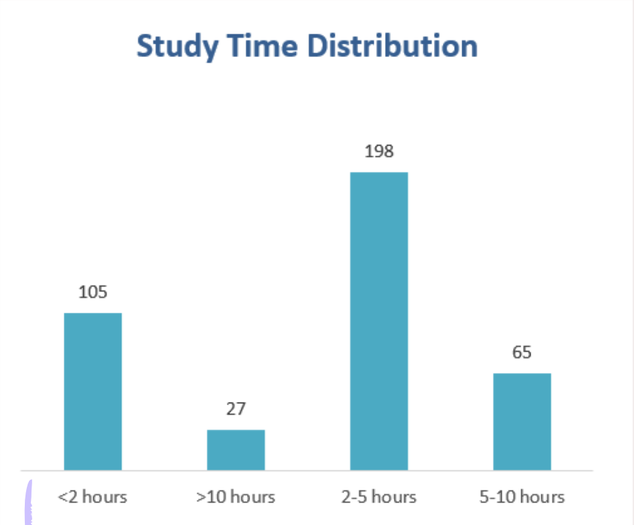


The dashboard enables program managers to explore student data dynamically and monitor program outcomes more efficiently.

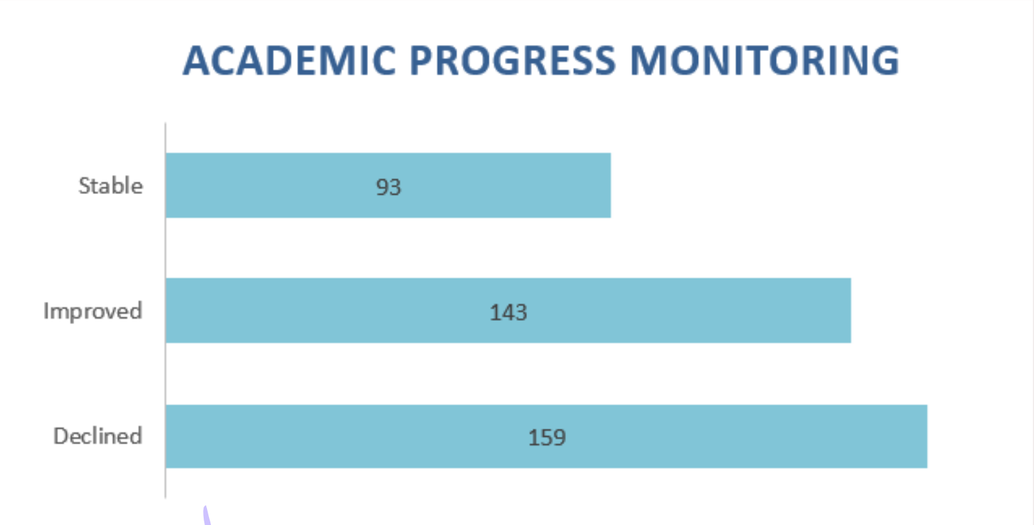
Dashboard Overview



47% of students are classified as academically at risk.



Most students study between 2–5 hours per week.



More students show declining academic progress compared to improvement.

Key Insights

- Nearly half of the monitored students show academic risk indicators.
- Academic progress trends highlight the need for early intervention.
- Study time patterns suggest moderate learning engagement among students.
- Attendance levels are generally stable with low high-absence cases.

Potential Program Actions

- Provide academic tutoring for students flagged as at risk.
- Monitor students showing declining academic progress.
- Encourage structured study schedules to improve engagement.
